1 Introduction

1.1 Purpose of this document

Imagicle Voice Analytics is a cloud-based add-on module for Imagicle Call Recording application, which allows to transcribe the content of audio conversations saved in Imagicle On-prem and Cloud UCX Suite.

By configuring Imagicle Call Recording for automatic recording upload or by manually selecting the audio files to transcribe, these recordings appear in Voice Analytics web portal, ready to be analyzed for content and sentiment.

Users and company controllers/administrators can leverage existing SSO credentials or the self-provisioned password to login to Imagicle Voice Analytics web portal.

The interface is available in six different languages: English, French, Spanish, German, Portuguese and Italian. In an international environment, each user has a localized access to the application with own language.

1.2 Imagicle UCX Suite overview

Imagicle Voice Analytics is the perfect add-on to the Imagicle UCX Suite, which provides a set of best in class applications empowering and simplifying existing collaboration offering.

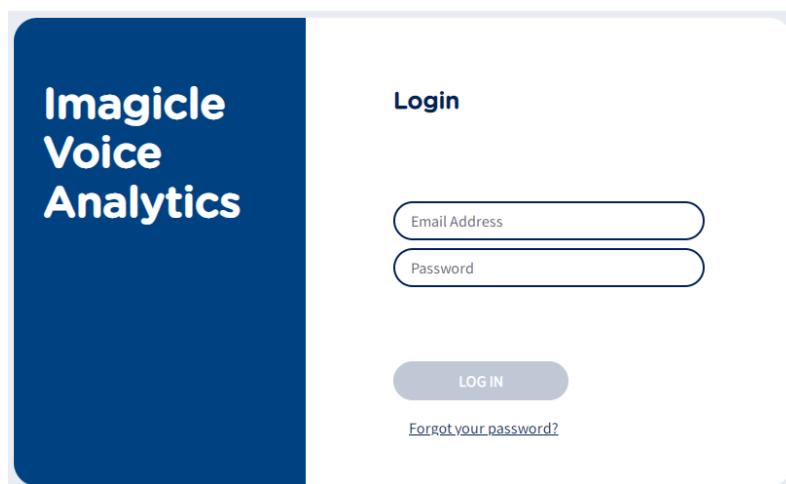

The Imagicle UCX Suite addresses the needs of organizations from any vertical, providing an awesome experience to all users, from their Jabber desktop and mobile clients, Webex clients, IP Phones, browsers, and mobile devices (iOS-Android Smartphones & tablets).

All the applications can be accessed through an easy to use Web Interface: Digital Fax, Call Recording, Contact Manager Services-CallerID-ClickToCall, Attendant Console-CTI-Advanced Queueing, and more.

Its own web portal provides users a single integrated environment to get access to all functionalities by logging in once.

2 Voice Analytics – Users’ Web Portal

Imagicle Voice Analytics provides its own web access. Just open a supported web browser, like Firefox, Chrome or Safari, and enter the following Internet URL: <https://apps.imagicle.cloud/> to bring the Imagicle Voice Analytics login page:

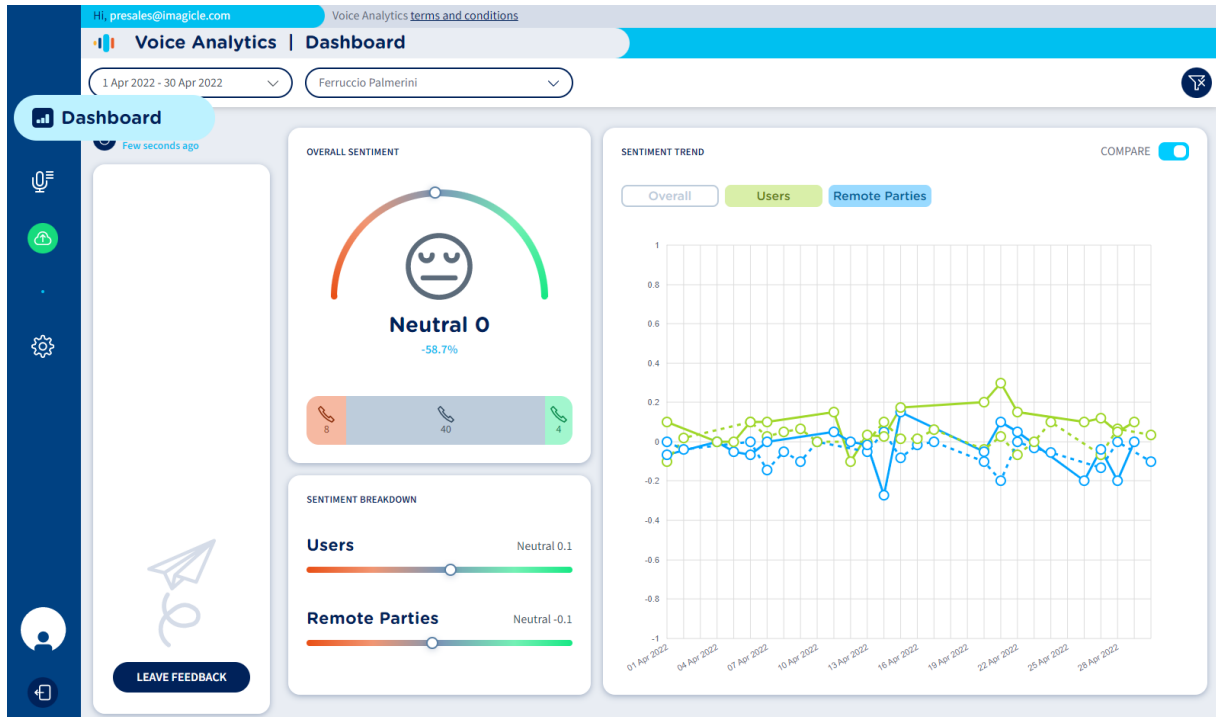

The screenshot shows the login page for Imagicle Voice Analytics. On the left, there is a dark blue vertical banner with the text "Imagicle Voice Analytics" in white. On the right, the page is white with the heading "Login" in bold. Below the heading are two input fields: "Email Address" and "Password". Below these fields is a "LOG IN" button. At the bottom of the login area, there is a link that says "Forgot your password?".

Username is always the email address. If your company is leveraging Single Sign-On authentication, then your login is redirected to your Identity Provider to apply multi-factor authentication, where applies.

IMPORTANT Based on your job function, you can have access to Voice Analytics interface as Administrator, Controller or standard User. Controller can view and transcribe recordings performed by the whole company, Administrator can provision new users and view/transcribe all recordings, while a standard user can view/transcribe own recordings only.

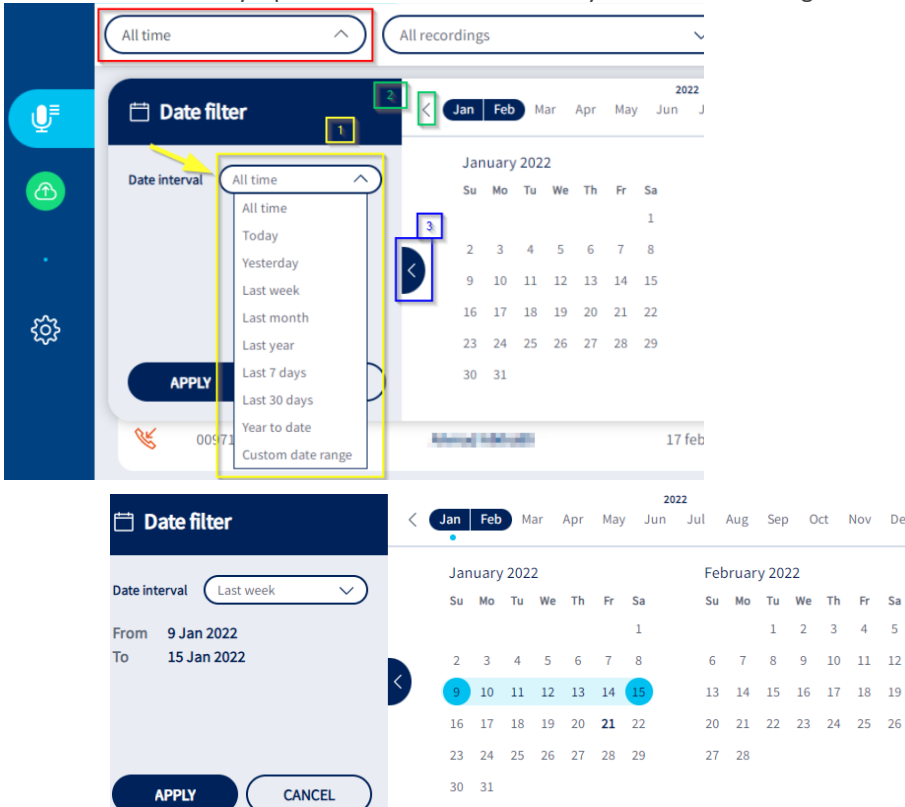

2.1 Voice Analytics Dashboard

Once authenticated, user accesses to Voice Analytics **Dashboard** page, which shows statistical data about the own behavior, in terms of sentiment analysis trends. Below you can see an Imagicle Voice Analytics Dashboard sample:

On top page header, you can apply multiple **filters** on collected conversations and relevant sentiment data:

- Date filter → Filter by a predefined time interval or by a custom date range. See below:

The Date filter interface includes:

- Date interval:** A dropdown menu with options: All time, Today, Yesterday, Last week, Last month, Last year, Last 7 days, Last 30 days, Year to date, and Custom date range.
- Calendar:** A calendar view for January 2022 and February 2022.
- Buttons:** APPLY and CANCEL buttons.

- Users' filter → Available to Voice Analytics "Controller" or Admin only, allows to apply a filter to list recorded conversations uploaded by specific user(s) only.
- Funnel icon  → to remove all configured filters

Analyzed data involves the logged user only and it provides three "widgets" including different data:

2.1.1 Overall Sentiment

Embedded gauge graph represents sentiment average level of those conversations included in applied time frame, with an incremental/decremental percentage against previous adjacent time frame.

In the lower part of the widget, three counters are respectively showing the number of **negative**, neutral and **positive** calls.

If you hover mouse pointer on this widget, additional data is displayed:

- Applied time frame and adjacent previous time interval, considered to calculate the incremental/decremental percentage.
- An up or down arrow indicating an overall increase (more positive) or decrease (more negative) of sentiment value.
- Sentiment value range, between -1 and +1

2.1.2 Sentiment Breakdown

Embedded slider graph represents sentiment average levels of those conversations included in applied time frame, referred to local party (user) and remote party.

If you hover mouse pointer on this widget, additional data is displayed:

- Applied time frame.
- Sentiment value range, between -1 and +1

2.1.3 Sentiment Trend

This widget includes a graph representing sentiment trends of those conversations included in applied time frame, at overall, local party (user) and remote party selectable levels.

X-axis represents selected time frame, where a proper time unit is applied depending on filtered time range: hour, day, week, month.

On top of the widget you can find three buttons, to respectively toggle **Overall**, **Users** and **Remote parties** sentiment graph patterns. By default, only Overall pattern is switched on, but you can turn on all of them or just select the required one(s).

COMPARE switch on top-right allows to show or hide trend patterns related to previous adjacent time frame. Previous time frame trend patterns are displayed with dotted lines.

If you hover mouse pointer on this widget, additional data is displayed:

- Applied time frame and adjacent previous time interval, considered to display relevant trend patterns.

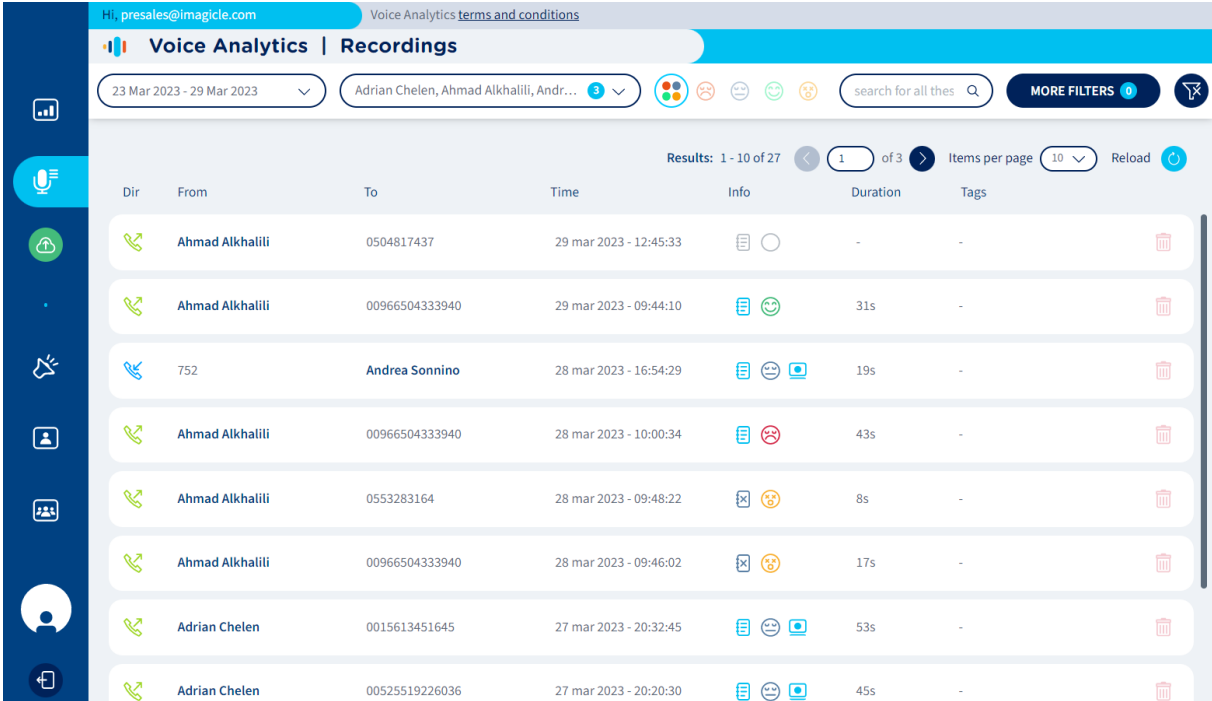

Placing mouse pointer on X-axis time units intersecting trend patterns, pops-up a detail panel including filtered time frame and sentiment values of selected graph patterns (Overall, Users and Remote parties) in the specific date/time.

On **left-side bar**, five options are available:

-  → to access sentiment dashboard (default landing page)
-  → to access recorded conversations list
-  → Upload new recording
-  → to access Imagicle Corporate web site
-  → to logout from Voice Analytics web portal

2.2 Voice Analytics Recordings Page

Next available menu item is Voice Analytics **Recording** page, which shows the list of all available recordings performed by the user. Below you can see an Imagicle Voice Analytics Conversations page sample:

Dir	From	To	Time	Info	Duration	Tags
	Ahmad Alkhalili	0504817437	29 mar 2023 - 12:45:33	 	-	-
	Ahmad Alkhalili	00966504333940	29 mar 2023 - 09:44:10	 	31s	-
	752	Andrea Sonnino	28 mar 2023 - 16:54:29	  	19s	-
	Ahmad Alkhalili	00966504333940	28 mar 2023 - 10:00:34	 	43s	-
	Ahmad Alkhalili	0553283164	28 mar 2023 - 09:48:22	 	8s	-
	Ahmad Alkhalili	00966504333940	28 mar 2023 - 09:46:02	 	17s	-
	Adrian Chelen	0015613451645	27 mar 2023 - 20:32:45	  	53s	-
	Adrian Chelen	00525519226036	27 mar 2023 - 20:20:30	  	45s	-

For each recording entry, the following data is available:

- **Dir** → Call direction:  = Inbound;  Outbound
- **From** → Calling Party name or phone number
- **To** → Called Party name or phone number
- **Time** → Date/time stamp
- **Info** → Icon  to indicate transcription status; emoticon  to indicate sentiment analysis status; icon  indicates a screen recording is available for this call. Icon  indicates that a text note has been added to this recording; If these   icons appear, then something went wrong during transcription/sentiment analysis.
- **Duration** → Call duration
- **Tags** → Matched tag(s) inside the conversation
- **Delete** → Trash icon to delete a recording entry

On top page header, you can apply more **filters** on conversations list, in addition to those highlighted in section 2.1:

- Keyword/sentence search → allows to search for specific text across all transcribed recordings
- Sentiment filters (multiple options can be selected):
 -  → Any sentiment
 -  → Negative sentiment calls only
 -  → Neutral sentiment calls only
 -  → Positive sentiment calls only
 -  → Sentiment data not available
- **MORE FILTERS** → allows to apply additional search criteria across all imported/transcribed recordings. See below:

2.3 Recorded MP3 audio file upload

Imagicle UCX Suite ver. 2022.Winter.1 and above allows to automatically upload all recorded conversations to Voice Analytics web portal. Nevertheless, if you are leveraging an older UCX Suite version or you have some recordings performed before purchasing Voice Analytics subscription, you still have the chance to manually upload these MP3 audio files, once exported from Imagicle Call Recording “Search & Play” web portal or gadget. Please consult Imagicle UCX Suite’s Call Recording [User Guide](#) for more details.

Once you hit **Upload** button , a dialog pops-up. See below sample:

→ Drag & drop your MP3 file in this area or click to open file system dialog to locate the file within your workstation

→ Conversation language to be transcribed. You can manually choose language or let internal engine detect the correct one

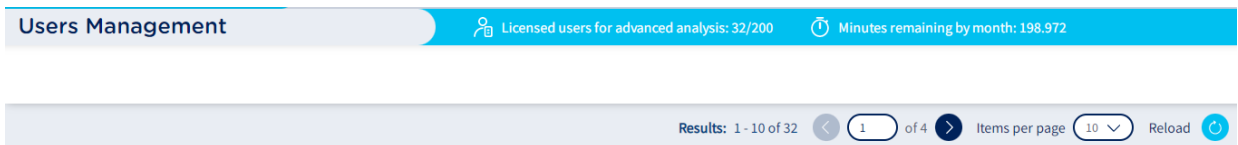

→ Number of call parties. You can manually select the number of parties or let internal engine detect the correct one

Once MP3 file is uploaded, Voice Analytics engine immediately starts the transcription and sentiment analysis, which might require few minutes, depending on call duration.

Please note that foreign MP3 files, not coming from Imagicle Call Recording application, or files greater than 25 Mbytes are rejected by Voice Analytics engine.

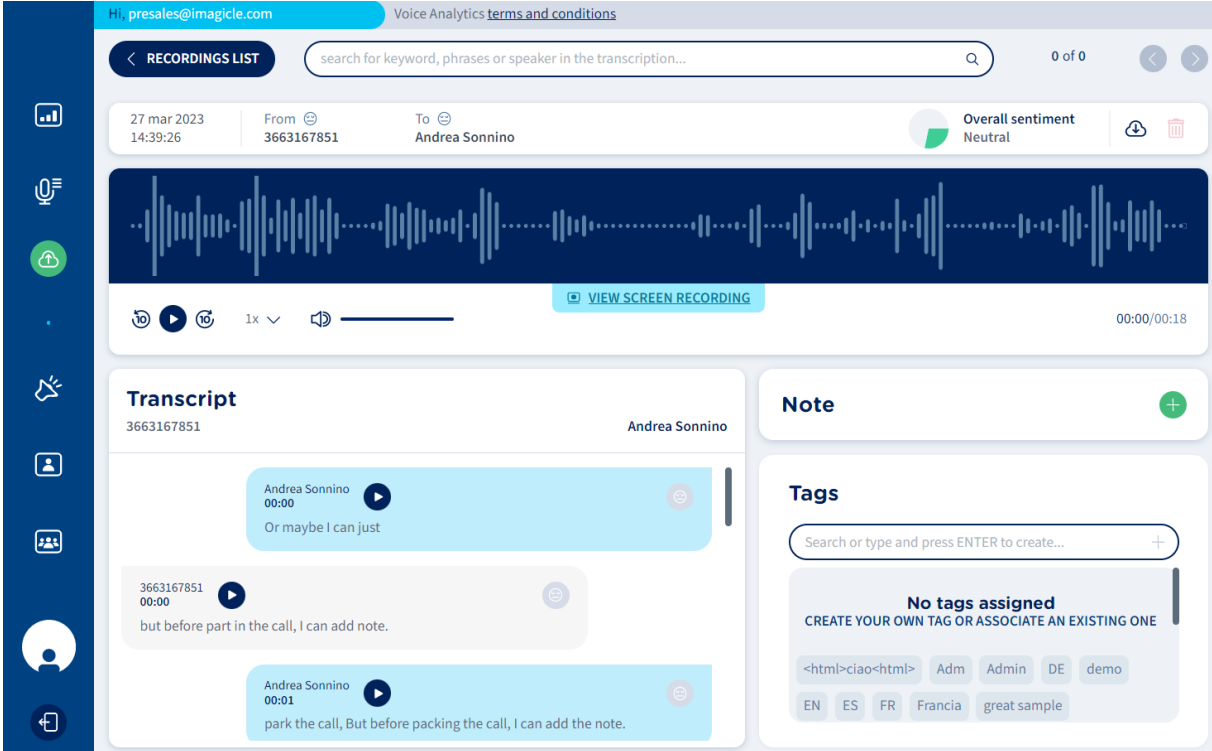

Please do not forget that Voice Analytics subscription is based on overall amount of analyzed conversation minutes available to each user or company-wide. If the maximum amount of minutes has been reached, the application might refuse new recordings automatic/manual upload.

Overall amount of available licenses and residual minutes are always displayed in top web page header, as below sample:

2.4 Voice Analytics Recording Transcription and Sentiment Analysis

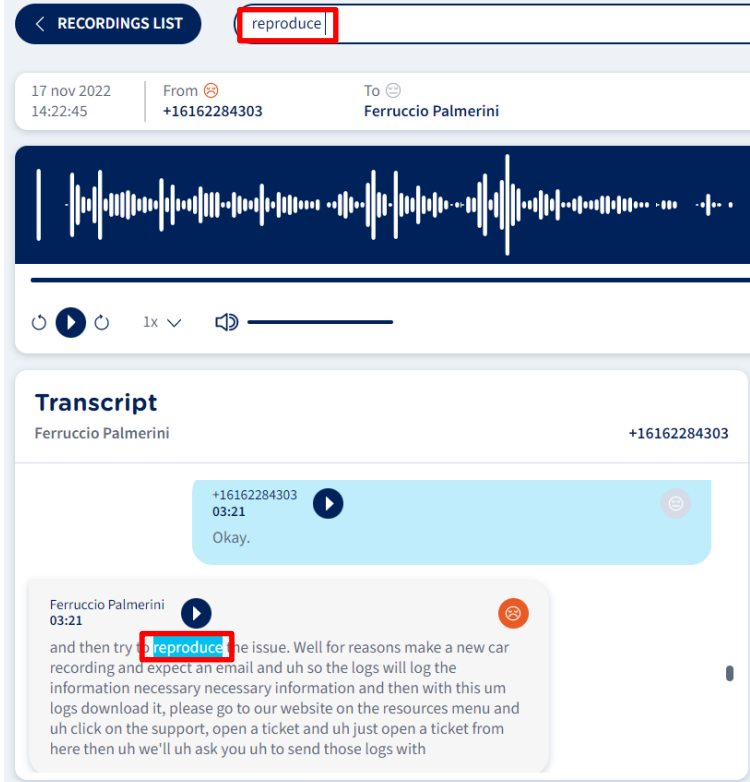

From Voice Analytics **Recordings** page, you can click on any available recording to access relevant audio transcription and sentiment analysis. See below screenshot sample:

The screenshot shows the Voice Analytics interface for a recording on 27 mar 2023 at 14:39:26. The recording is from 3663167851 to Andrea Sonnino. The overall sentiment is Neutral. The transcript shows three segments: Andrea Sonnino (00:00) saying "Or maybe I can just", 3663167851 (00:00) saying "but before part in the call, I can add note.", and Andrea Sonnino (00:01) saying "park the call, But before packing the call, I can add the note." The note section is empty, and the tags section shows "No tags assigned" with a list of tags including EN, ES, FR, Francia, and great sample.

On top page header, you can find:

- Keyword/sentence search → allows to search for specific text within selected recording. See below:

The screenshot shows the Voice Analytics interface for a recording on 17 nov 2022 at 14:22:45. The recording is from +16162284303 to Ferruccio Palmerini. The search bar contains the word "reproduce", which is highlighted in a red box. The transcript shows two segments: +16162284303 (03:21) saying "Okay." and Ferruccio Palmerini (03:21) saying "and then try to reproduce the issue. Well for reasons make a new car recording and expect an email and uh so the logs will log the information necessary necessary information and then with this um logs download it, please go to our website on the resources menu and uh click on the support, open a ticket and uh just open a ticket from here then uh we'll uh ask you uh to send those logs with".

- Panel including date/time stamp, call parties names/phone numbers, overall sentiment and a button to export the transcription content. By clicking  icon, the following pop-up appears, allowing to download the transcription as text file:

Do you want to download the transcription?

Under recording summary panel, you can find a graphic pattern representing audio recording over a blue background. This is actually an **audio player**, which allows to listen to the whole recording content. If a screen recording is associated to the call, a “[VIEW SCREEN RECORDING](#)” link appears underneath the audio player. If you click on it, a new video viewer window pops-up, allowing to simultaneously watch audio+screen recording.

Note panel to the right allows the user to add a text note indicating the subject of the conversation and other valuable information. This note is searchable from Recordings page.

Tags panel to the right allows to add specific keywords/sentences tags to the recording, for an easier retrieval of several recordings including one or multiple tags.

when you when you type a note in the the ticket, please

+16162284303 🗨️

→ Header including call parties names/phone numbers.

→ Each conversation leg includes involved call party, a time stamp, play audio button, voice transcription and sentiment analysis emoticon:

-  → Happy (positive) mood
-  → Neutral mood
-  → Bad (negative) mood

The AI engine embedded in Voice Analytics application can analyze the intonation, cadence and emphasis of the whole conversation or single sections, to detect the “mood” of involved call parties and rate it as negative, neutral or positive.

This is extremely useful to understand how the conversation went and eventual outcome. If a customer calls a customer service call center, this tool allows to evaluate the performances of call center agents by just checking overall call sentiment or by analyzing mood trends (from negative to positive or vice versa).
