### Product overview

#### **Cutting telephone expenses is so easy.**

Blue's Enterprise 4 is the most advanced solution for telephone traffic control and monitoring, both for single-site and distributed companies, starting with a few dozen phone extensions up to an unlimited number of extensions and sites. In this video, you will get a brief overview of the product.

## **Run a report**

### **Everything under control.**

Learn how pre-set and ready-to-use reports that can be customized with filters and groupings. All anyone needs is a browser to access their own or the organizations' calls, depending on their profile. You can also receive statistics via e-mail in PDF or MS Excel format, at the desired frequency.

## Define your phone budget

### Avoid nasty phone bill surprises..

With the additional Budget Control module, you can decide in advance how much you want to spend, monitor your budgets in real time to avoid nasty surprises when the phone bill arrives.

## Create Alarm

### Uncover abuses and telephone fraud.

Blue's Enterprise 4 keeps close watch so you can get your work done. With alarm scheduling, any undesired event automatically results in an alarm being sent to your e-mail. So, for example, you will be notified in real time if a call is made outside of business hours, if a cost budget is exceeded, and so on.

## Tariff Management

### Calculate costs with any Telecom operator.

You can correctly calculate the cost of calls using several carriers at once. You can easily manage and customize any per usage or connection-fee price list, and calculate the cost of your LCR based on complex routing according to time/line/number/operator code.
