## Product overview

**Cutting telephone expenses is so easy.**

Billy Blue's 4 is the most advanced solution for analyzing and monitoring telephone traffic for Cisco UCM, BE6000-7000 and HCS. Complete, scalable and ready to use, Billy Blue's meets the needs of single- and multi-site clients, from a few to 50,000 extensions. In this video, you will get a brief overview of the product

# Run a report

**Everything under control.**

Learn how to run pre-set and ready-to-use reports, that can be customized with filters and groupings. You can also receive statistics via e-mail in PDF or MS Excel format, at the desired frequency.

# Define your phone budget

**Avoid nasty phone bill surprises.**

With the additional Budget Control module, you can decide in advance how much you want to spend, monitor your budgets in real time and automatically lock your company's phones to avoid nasty surprises when the phone bill arrives.

# Tariff Management

**Calculate costs with any Telecom operator.**

You can correctly calculate the cost of calls using several carriers at once. You can easily manage and customize any per usage or connection-fee price list, and calculate the cost of your LCR based on complex routing according to time/line/number/operator code.

# Create alarm

## Uncover abuses and telephone fraud.

Billy Blue's 4 keeps close watch so you can get your work done. With alarm scheduling, any undesired event automatically results in an alarm being sent to your e-mail. So, for example, you will be notified in real time if a call is made outside of business hours, if a cost budget is exceeded, and so on.
