

# Screen Recording UC Suite Settings

Starting from Imagicle 2023.Winter.1 UC Suite release, a new Screen Recording add-on is available for Imagicle Call Recording application.

This add-on allows voice recording-enabled users to capture their screen activity during an ongoing call. Once call is ended or recording is stopped, a video file is saved and available to download from Call Recording Search and Play web page.

In the following paragraphs, we highlight UC Suite configurations to apply at global level and for each user to leverage the screen capture feature.

## Screen Recording Global Settings

Please access to Imagicle UC Suite web portal as Administrator and go to Call Recording â Global Settings

The rightmost tab in this menu item is called "Screen recording" and allows to setup the connection to Screen Recording's server component, the behaviour during recording pause and finally the users' permission to retrieve recorded video sessions:

## Connection setup

By accessing this section, you are invited to enter the connection settings toward Screen Recording components typically co-located inside UC Suite actual/virtual server:

Call Recording    All Recordings    My Recordings    Reports    Scheduled Reports    **Global Settings**    Manage Service

**Settings**    **Data Management**    **Notifications**    **Announcements**    **Screen Recording**

**Connection** ▼

Here you can configure options to integrate with Screen Recording service. It is recommended to apply or change the configuration while there are no screen recordings in place in order to limit possible disservice and data loss. [Get more details in the Imagicle Knowledge Base.](#)

Enable ☒

**Authentication**

Server address

Username

Password

**Behaviour preferences** >

**Permissions** >

- **Enable:** flag to enable/disable Screen Recording add-on
- **Server address:** type here the Screen Logger Screen Server hostname/FQDN.
- **Username:** This is the Administrator username configured into Screen Logger Management Studio.
- **Password:** This is the Administrator password configured into Screen Logger Management Studio.

Please refer to [this](#) KB article for above Screen Recording Engine preliminary setup.

If entered data is congruent with Screen Recording Engine data, the "Test credentials" button provides a positive connection feedback.

## Behaviour preferences setup

Next Screen Recording section allows to choose the preferred behaviour while pausing an ongoing voice recording and what to do when phone call is ended or recording is manually stopped:

Behaviour preferences

Blanking behavior

Blanking behaviour:

Blank out screen recording content when audio recording is paused (Active)

The content of the screen recording is blurred for as long as the audio recording is paused. This option requires that the 'Pause/Resume' command for audio recordings has been enabled in the above Recording controls section

Wrap-up time

Use this wrap-up profile:

Keep screen recording active even after the audio recording ends (Active)

Extend by

30 seconds

30 seconds

60 seconds

90 seconds

3 minutes

5 minutes

10 minutes

The wrap-up time will affect the increase in size of the screen recording file

Save

Cancel

### Blanking behaviour - two options:

- Blank out screen recording when audio recording is paused
- Always display the whole content of the screen recording

### Wrap-up time - two options:

- Keep screen recording active even after the audio recording ends
  - ◆ Extend by an interval between 30 seconds and 10 minutes
- Stop screen recording right after the audio recording ends

## Permissions setup

In this section, the Administrator can decide the minimum Call Recording user's permission level to allow recorded screens video download from Call Recording Search and Play web page:

Settings

Data Management

Notifications

Announcements

Screen Recording

Connection

Behaviour preferences

Permissions

Recordings can be downloaded by:

Administrators

Simple Users

Group Supervisors

Administrators

Save

Cancel

### Recordings can be downloaded by - three options:

- Simple Users
- Group Superusers
- Administrators

## Screen Recording Users' properties

Each user enabled for Screen Recording must have "Screen recording agent username" compiled with own Windows logon credentials.

Call Recording			
Numeric User ID	<input type="text"/>	Numeric Partition ID	<input type="text"/>
Group Name	<input type="text" value="Sales"/>	Additional supervised groups (e.g.:Sales;Marketing;Board)	<input type="text"/>
Send email notifications	<input checked="" type="checkbox"/>	Attach recording file to email notifications	<input checked="" type="checkbox"/>
Screen recording agent username	<input type="text" value="john.smith"/>		

Typically, this field can be automatically imported from AD, if relevant users' synch connector is configured. Source attribute is "sAMAccountName".

**Note:** Screen Recording username should match the agent's credentials acquired by Screen Recording Engine once the workstation is enabled for screen capture. See [here](#) for more details.
