

## Service management

### Starting Services

Access to Imagicle UC Suite web portal as administrator and go to Digital Fax & Manage Service. Here you can find the diagnostic page of Digital Fax service.

Just click on the Start button to start Digital Fax, if not already running.

You can also start Digital Fax services through Windows service console by starting the SFXAL service. **SFXAL is only a stub that will start Digital Fax and then stop.** It is needed to start Digital Fax when you reboot the server.
